Management System**

# DSAMS... Information Serving Security Assistance

ARMY

**Concept**

**SA3 \***

**ASATMS**

**SACTS \***

NAVY

**MISIL**

**NSADS \***

**STATIS**

AIR FORCE

**CMCS \*\***

**SAMIS**

**TRACS**

DSCA

**DSCA 1000**

**DSCA 1200**

**DSCA FMF**

**13 existing legacy systems are collectively expensive to maintain, are aging, have limited interfaces, and are non-standard**

**DSAMS**

**\* = Already completely replaced by DSAMS**

**\*\* = Some functionality already replaced by DSAMS**

## Goals

- **Build a single system (DSAMS) by integrating best features of existing systems & new technology into a new standard DoD system**
- **Reduce costs by replacing all or part of 13 existing systems**
- **Improve customer support & reduce costs by standardizing/re-engineering business processes across MILDEPs/DLA/DFAS/DSCA**
- **Improve information services by logically consolidating Security Assistance information into the same arena**

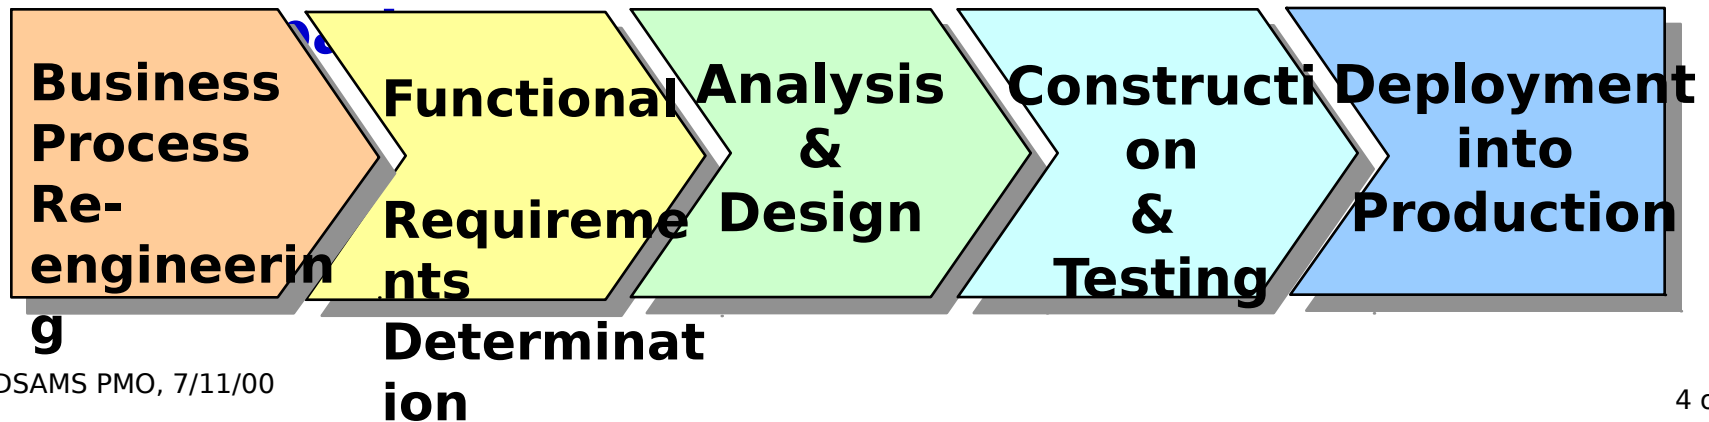

# Approach

- Building incrementally following core Security Assistance business processes:

- Following structured development approach, using a **team** of government/contractor developers, with extensive MILDEP/DSCA/DLA/DFAS/Customer

# Challenges

- Getting organizations to adopt new ways of doing business

- ✓ *Takes time but it is happening*

- Legacy data conversion

- ✓ *Old business rules are erroneous or not aligned with current policy; problem fortunately goes down over time*

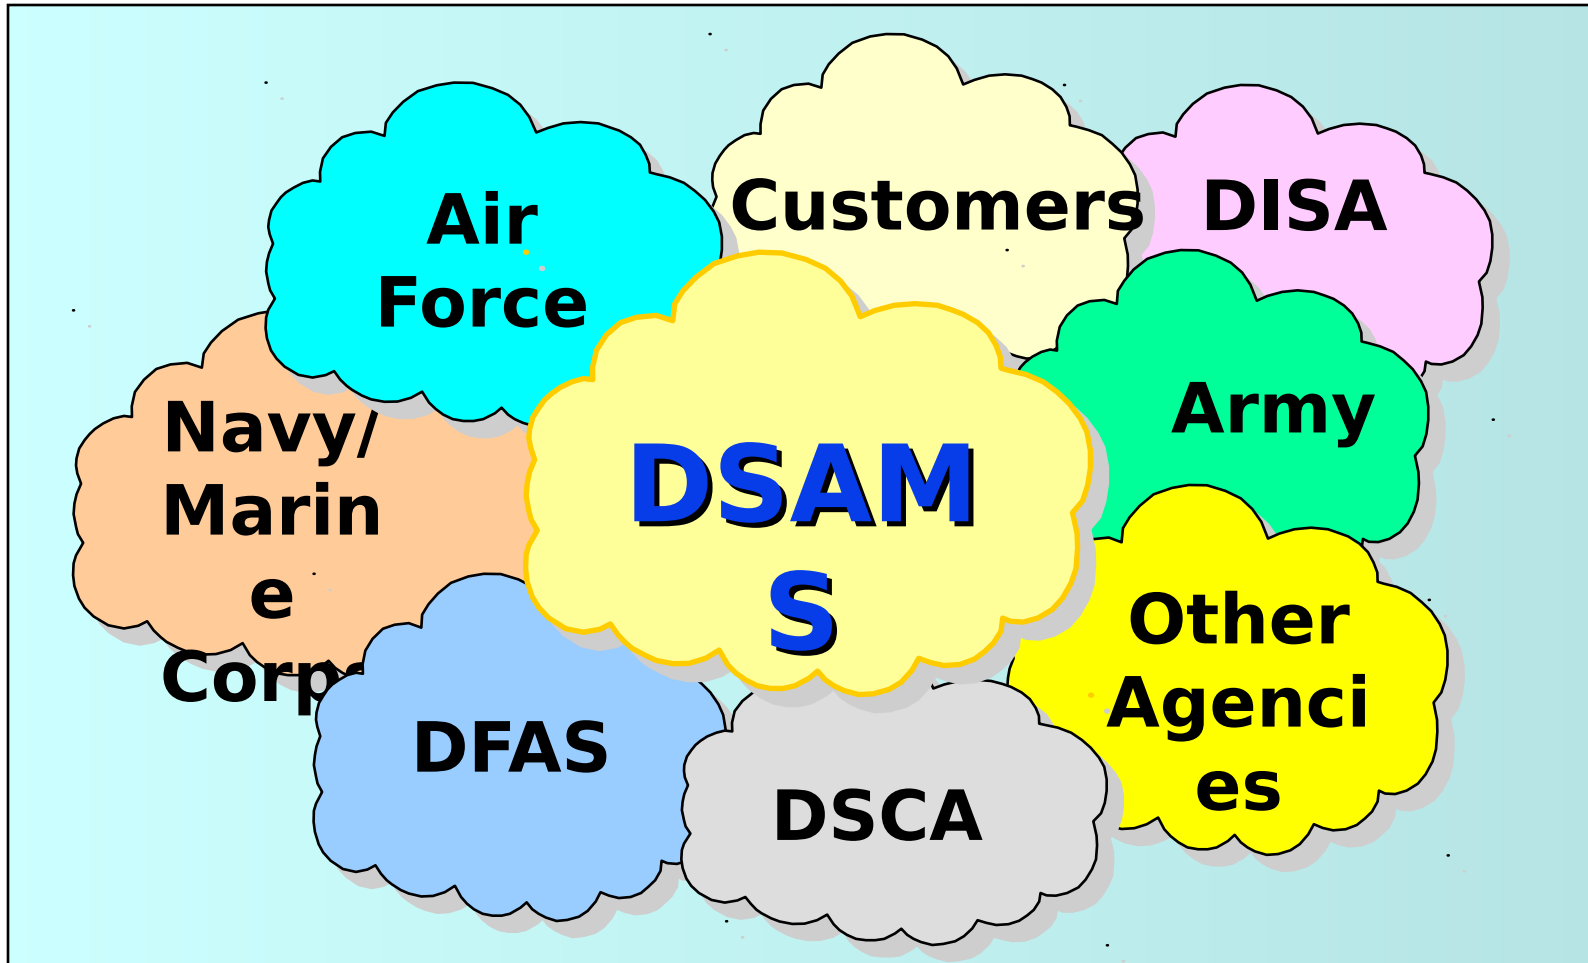

- Large changes in interfacing systems (e.g., DFAS accounting systems, MILDEP logistics systems)

- ✓ *Staying tuned in and actively represented on boards and committees*

- Other “normal” change (technology, people, policy, resources)

✓ *Anticipate, assess and make adjustments as*

# DSAMS

Building a Better System Together
